SECURE 7-24™

Developed by Avante, the Secure 724 Technology utilizes two-way, interactive, wireless signaling technology and automation. The 724 Communicator integrates to most existing alarm systems and provides real time alarm system reporting. Upgrade to the smartboxx and this latest release includes expanded functionality with a full range of extended automation and energy management features, all integrated to your existing alarm system.

SECURE 7-24™

Developed by Avante, the Secure 724 Technology utilizes two-way, interactive, wireless signaling technology and automation. The 724 Communicator integrates to most existing alarm systems and provides real time alarm system reporting. Upgrade to the smartboxx and this latest release includes expanded functionality with a full range of extended automation and energy management features, all integrated to your existing alarm system.

With the Avante smartboxx, our clients are empowered with monitoring and control of their energy usage, automation and security in any home or business environment. The Avante smartboxx "Anywhere. Anytime." remote monitoring and control technology hardware uses GSM, SMS and GPRS networks to interact and communicate.

The Avante smartboxx family of technologies includes: the Energy Manager, Server Room Protection Manager, Family Help Button and Flood Protector.

Secure 724 Technology allows for U-Connect features for remote viewing of cameras, remote control of security systems and other Smart Home monitoring services and features.
